Trimble Airborne Mapping Solutions

Ian Murgatroyd, Cliff Holle, Ruben James Ramos (PGPS)

Aerial Imaging Technology

- Picking the right tools for the job
- Doing more with those points and pixels

Agenda

- **Trimble UAS Portfolio**
- **Aerial Mapping Sensor Systems**
- **Trimble Business Center - Photogrammetry**
- **Applications/Software Deliverables**
- **Q&A**

TRIMBLE UAS PORTFOLIO

Why UAS Aerial Imaging?

- New emerging technology well suited for geospatial professionals
- Complementary to traditional surveying technologies and to traditional photogrammetry
- Many UASs, but not many targeting the geospatial industries

Trimble UAS Portfolio

Trimble UX5 HP
High Precision
Surveying and Mapping

Trimble UX5
Standard in Mapping

Trimble ZX5
Flexible Mapping &
Inspection

Select The Right Tool

Fixed Wing Solutions

- Larger open areas
- Horizontal mapping
- Efficient data capture

Multirotor Solutions

- Smaller obstructed areas
- Horizontal or Vertical
- Visual Inspections

transforming the way the world works

System Overview

Trimble UX5 Aerial Imaging Solution

Select The Right Tool

Fixed Wing Solutions

- Larger open areas
- Horizontal mapping
- Efficient data capture

Multicopter Solutions

- Smaller obstructed areas
- Horizontal or Vertical
- Visual Inspections

Trimble UX5 Aerial Imaging Solution

Trimble Access Aerial Imaging

Trimble UX5 Aerial Imaging
Rover & Trimble Tablet

Trimble Business Center
Photogrammetry Module

Trimble UX5 Aerial Imaging Rover

- **Airframe**
 - Internal carbon frame
 - Expanded polypropylene foam body
 - Engine & propeller
 - Servo-controlled elevons
- **Payload Bay**
 - Battery
 - Camera
 - Tracking beacon
- **eBox**
 - GPS & orientation sensors
 - 2.4 GHz radio
 - Autopilot

Trimble UX5 Specifications

- **Weight: 2.5 kg**
- **Wingspan: 100 cm**
- **Launch Type: Catapult**
- **Cruise Speed: 80 km/h**
- **Endurance (flight time): 50 min**
- **Flight Height (AGL): 75-750 m**
- **GSD: 1.5-15 cm**
- **Flight Ceiling: 5000 m**
- **Wind Speed: 65 km/h**
- **Landing Type: Belly**
- **Camera: Sony A5100 (24 MP)**

Trimble ZX5 System Features

- **Olympus 16.1MP Camera with automated triggering**
- **HD video capture & live video streaming**
- **Reliable flight controller**
- **Safety commands & automatic failsafe's**
- **Easy deliverable workflows with Trimble Business Center & UASMaster**

Trimble ZX5 Solution

Flight Planning Software

TBC APM Software UAS Master

Ground Control

Gimbal & Sensor

Battery Packs

Trimble ZX5 System Specs

- MULTIROTOR G4 flight controller
- Light rugged carbon structure
- Foldable arms and legs for easy transport
- Up to 20 minute flight time per mission
- Olympus E-PL7 16.1MP camera
- Brushless motorized gimbal
- Jeti DS 14 radio control station >1000m range
- Live view 5.8Ghz video (optional)
 - Jeti DS16 w/ 7" Color monitor
- Wind stable up to 10 m/s (22mph)
- Max. airspeed 30 km/h
- Max takeoff weight 5kg
 - Max payload includes camera, batteries 2.3kg
- GSD (ground sample distance) down to 1mm

UAS CASE STUDIES

AIRBORNE SENSORS (AX SYSTEMS)

Airborne Sensors (AX Systems)

- **Sensors / Components**

- *LIDAR (polygon line scanner)*
- *TAC Camera (mid format frame camera)*
- *GNSS/IMU*
 - *(AP 50/ AP60)*
- *Flight Mgt System*
- *Power distribution Unit with UPS*

- **Platform**

- *Fixed-wing*
- *Helicopter*

- **Key Applications**

- *Aerial survey and mapping*

TAC (Trimble Aerial Camera)

■ Technical Parameters

- mid format frame camera
- Metric calibrated
- RGB bayer pattern
- 65 or 80 MPixel
- Image release rate: < 2 sec / frame
- Global shutter (shutter speed up to 1/1000s)

■ Optional: FMC

Forward Motion
Compensation

Without FMC

Applications

- City modelling and mapping
- Agriculture and forestry
- Power transmission lines
- Pipelines
- Lakesides and river banks
- Glaciers and snowfields

PICK THE RIGHT TOOLS

Trimble's Photogrammetric Software

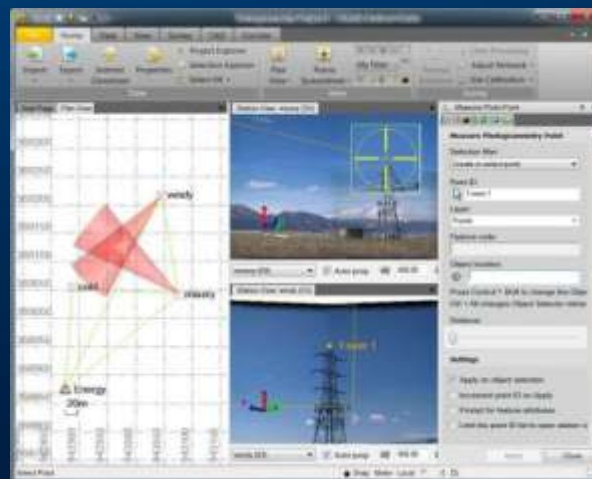

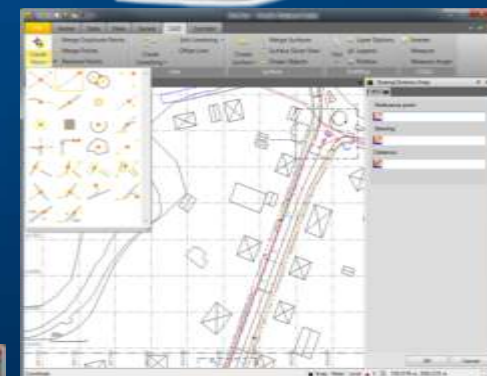

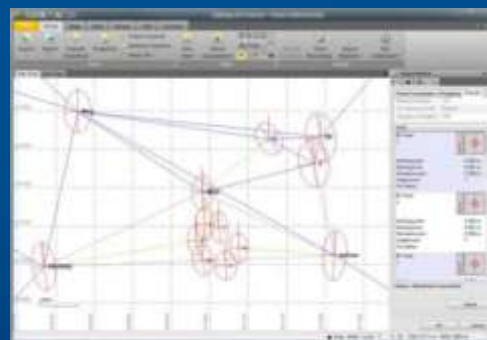

TRIMBLE BUSINESS CENTER (TBC)

What is TBC?

Powerful office software for survey and mapping professionals

- Coordinate Geometry
- Network Adjustment
- GIS
- CAD
- Support for many types of instruments
- Support from many types of import/export
- Raw data processing
- Export of stakeout designs
- Flexible Reporting

TBC Editions & Modules

TBC capabilities are available in different packages allowing users to purchase only what they need.

Editions

Modules

UAV Processing with Trimble

Inpho
7.0
photogrammetric
system

Modular full-blown photogrammetry suite, complete workflow for

- Large/medium/small format
- Frame/pushbroom
- Satellite
- Specialized UAV strategies

Trimble -
Inpho
photo-
grammetry

UAV Processing in TBC

- UAV processing for Trimble Survey
- black box batch processing
- Ease of use
- Limited to Gatewing hardware

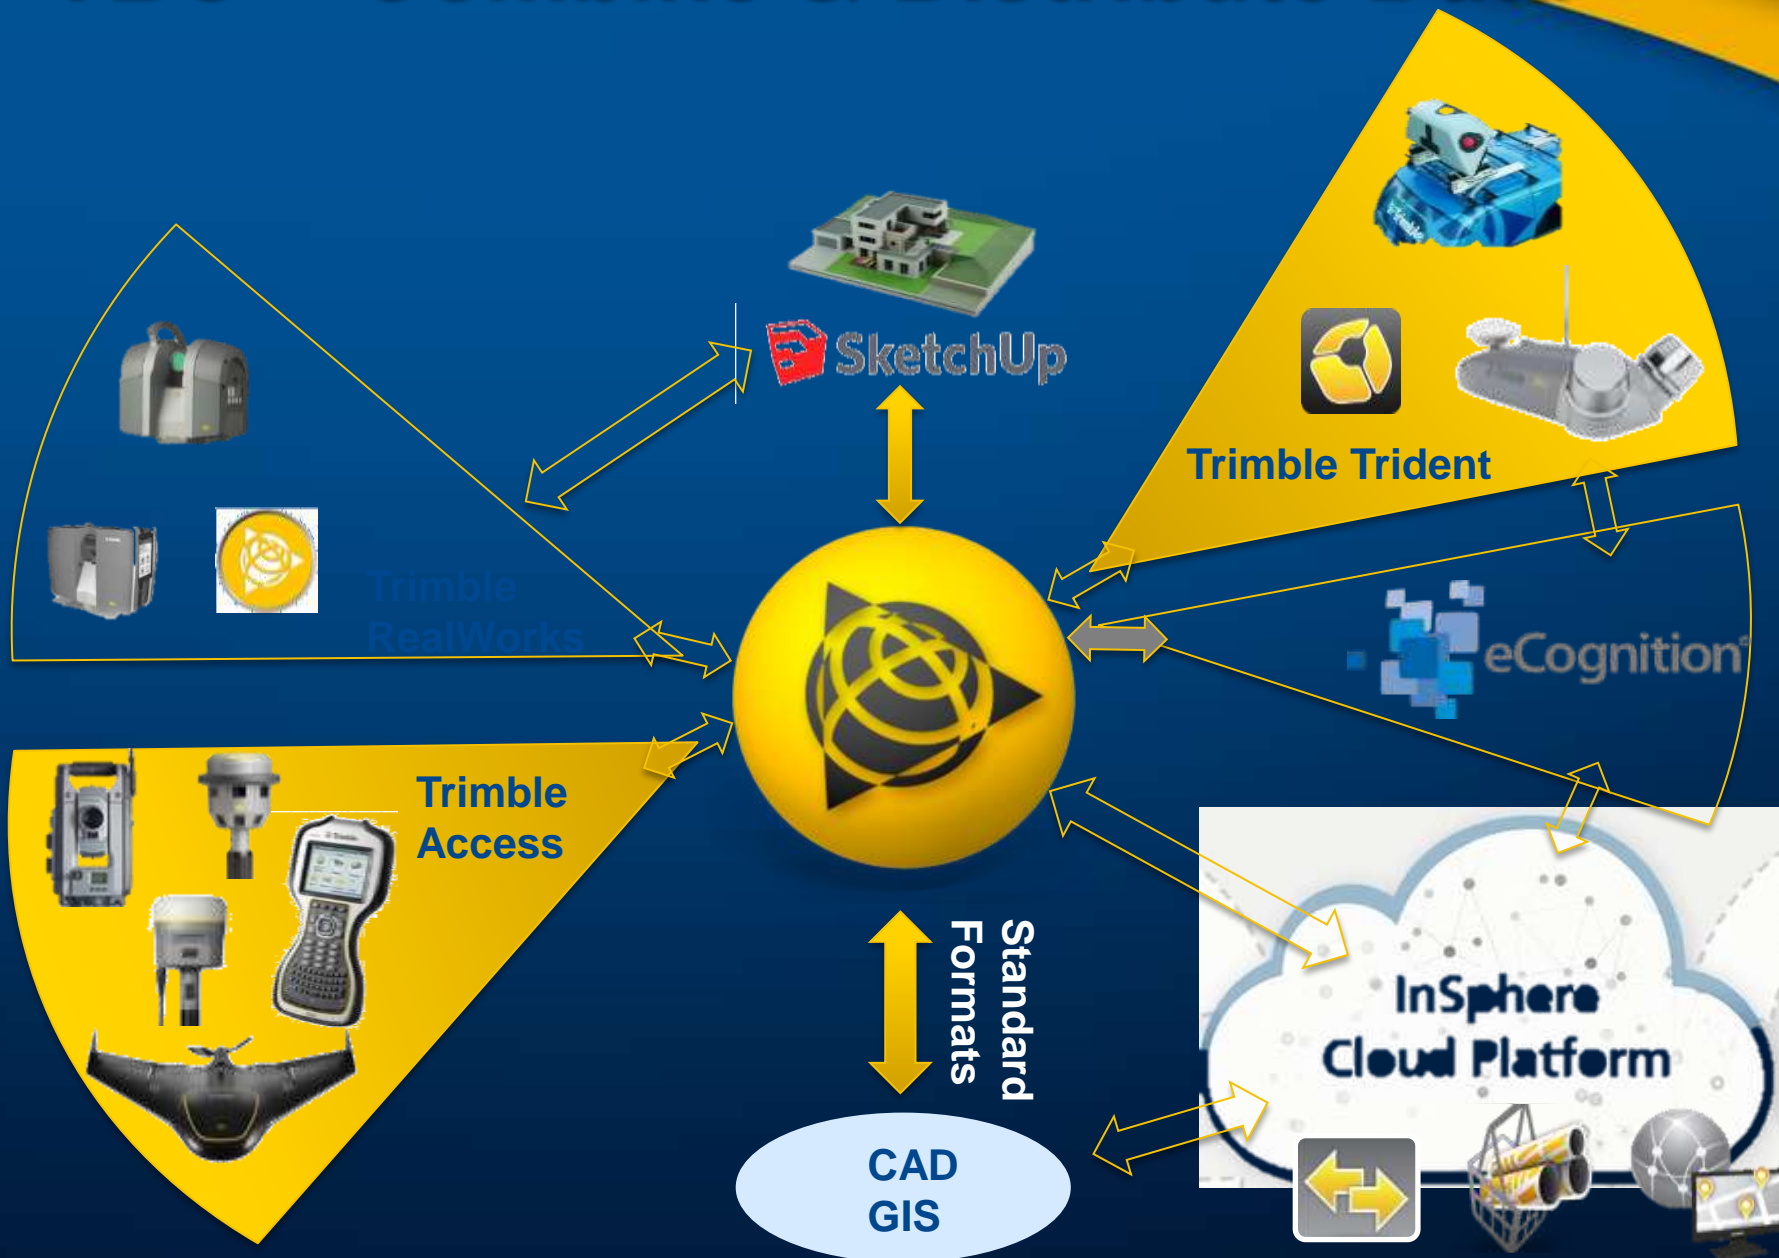

TBC
Trimble
Business Center
-
Photogrammetry

UAS
Master
(technology)

Specialized UAV Processing

- Open for any hardware
- Streamlined batch processing
- QA/QC Tools
- Editing capabilities
- photogrammetrists and surveyors

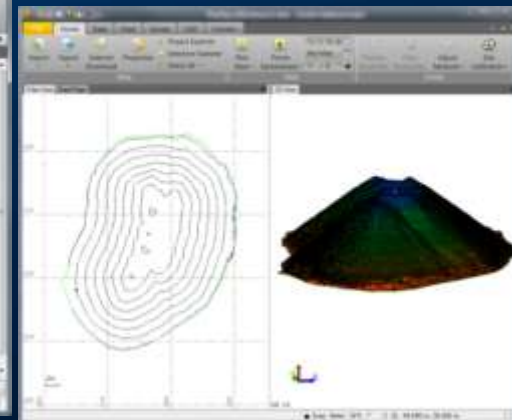

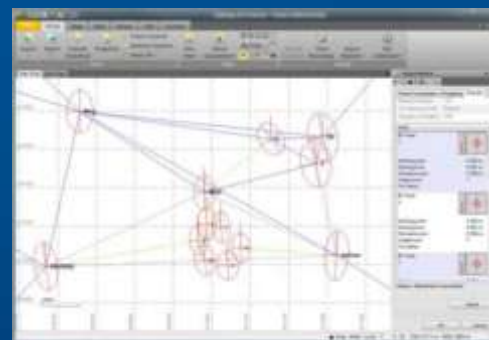

TBC - Combine & Distribute Data

Trimble Business Center

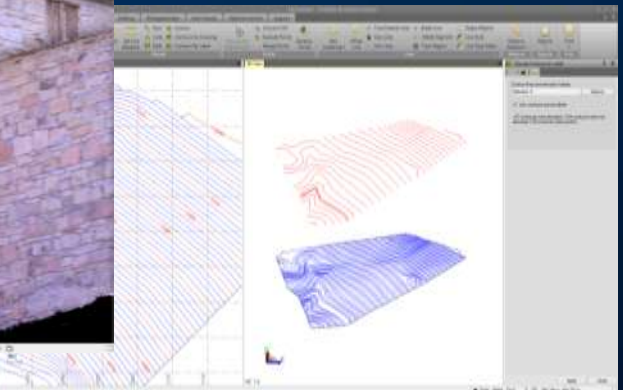

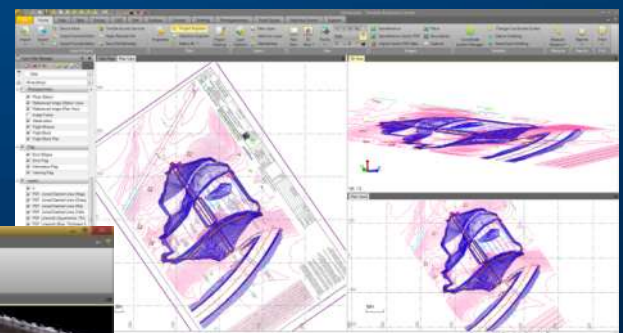

Versatile office software for survey and mapping professionals

- Coordinate Geometry
- Network Adjustment
- GIS
- CAD
- Support for many types of instruments
- Support from many types of import/export
- Raw data processing
- Export of stakeout designs
- Flexible Reporting

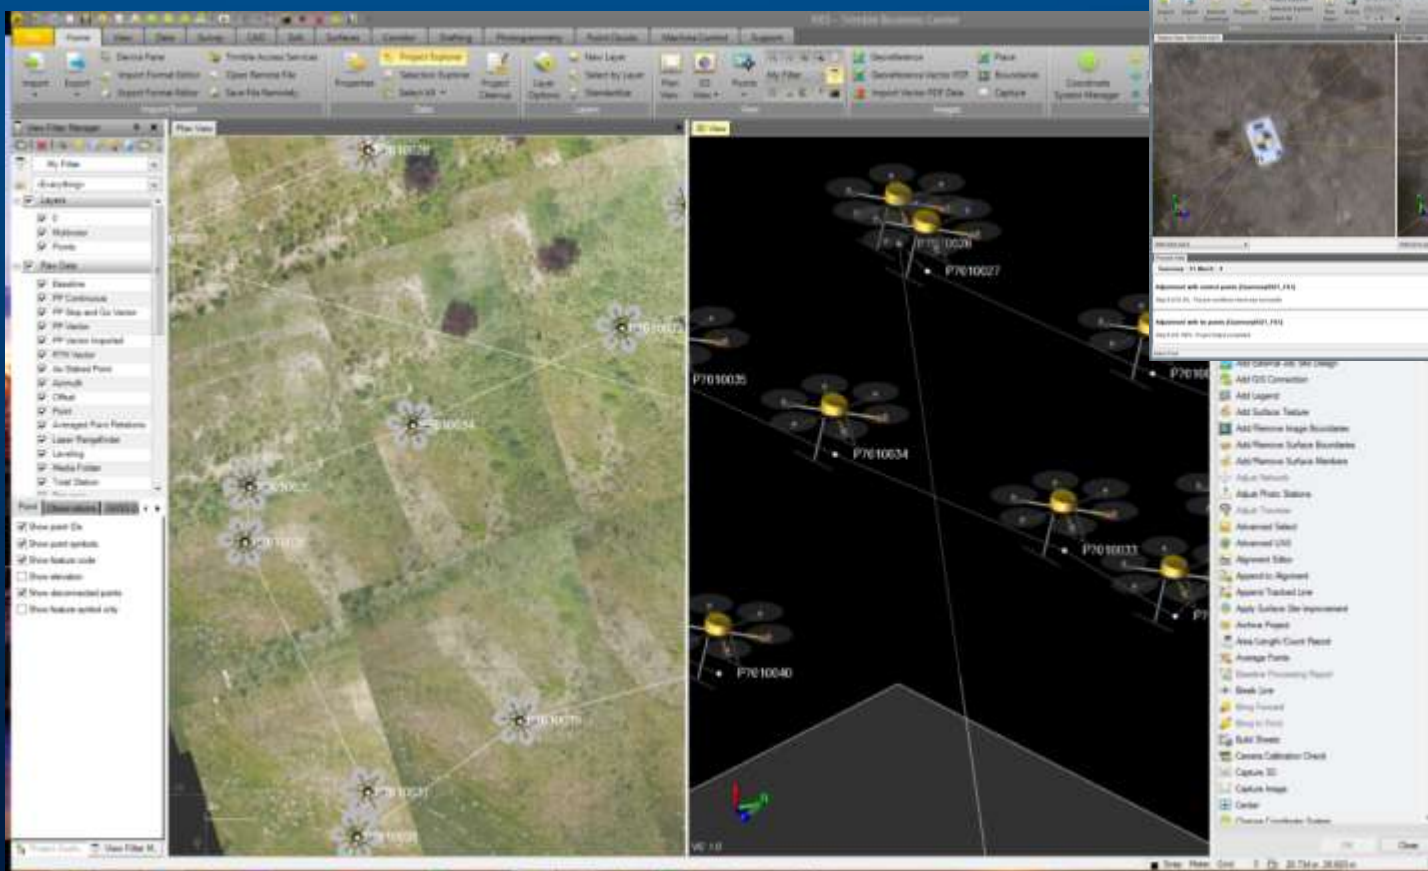

TBC Data & Deliverables

- Drawings & Models -.dwg, .dxf, .skp, PDF, 3D PDF, IFC, iModel, Plots, DTM, DSM, Contours, corridor designs, ...
- Measured Points - .txt, csv, jxl, ...
- GIS - .shp, ...
- Point Clouds – e57, LAS
- Images - .jpg, .bmp, KMZ, KML, Orthophotos, Panoramas, ...
- Measurements – Distance, Area, Volume, ...

Aerial Photogrammetry Module

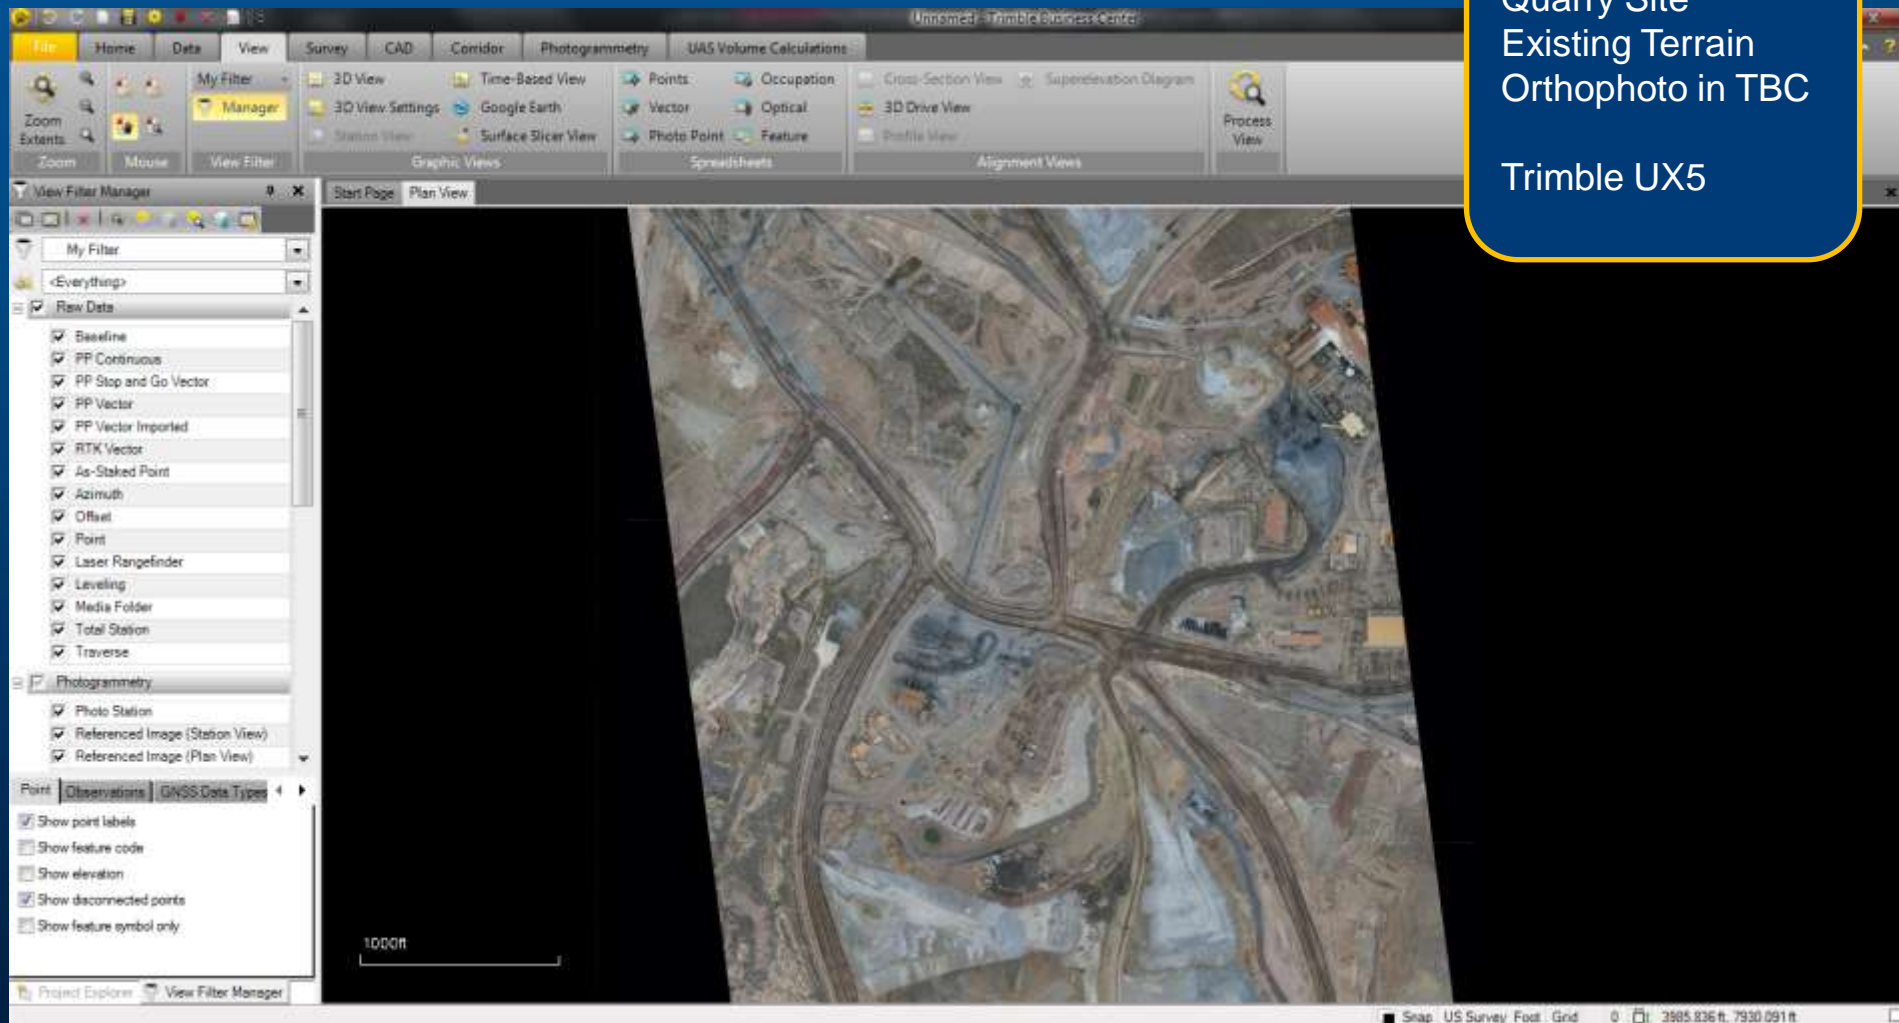

The TBC Aerial Photogrammetry Module produces a variety of high-value deliverables from UAS data

Stockpile Volume Analysis

Measured stockpile surface compared to estimated foundation surface

Surfaces	
Stockpile 2	Classification: Stockpile

Volumes from Surface Geometry	
Approximate stockpile volume:	151.2 yd ³
Approximate depression volume:	0.2 yd ³

Volumes by Depth Range

Elevation range	Cut (yd ³)	Fill (yd ³)
562.213 > 564.000	0.1	14.3
564.000 > 566.000	0.1	58.2
566.000 > 568.000	0.0	39.2
568.000 > 570.000	0.0	23.0
570.000 > 572.000	0.0	11.9
572.000 > 574.000	0.0	4.4
574.000 > 574.523	0.0	0.2

This is a report of the volume of a stockpile, as measured between the stockpile surface and a surface constructed from the base of the stockpile.

Quarry Site

Stockpile Volume
Reports from TBC

Stockpile Volume Analysis

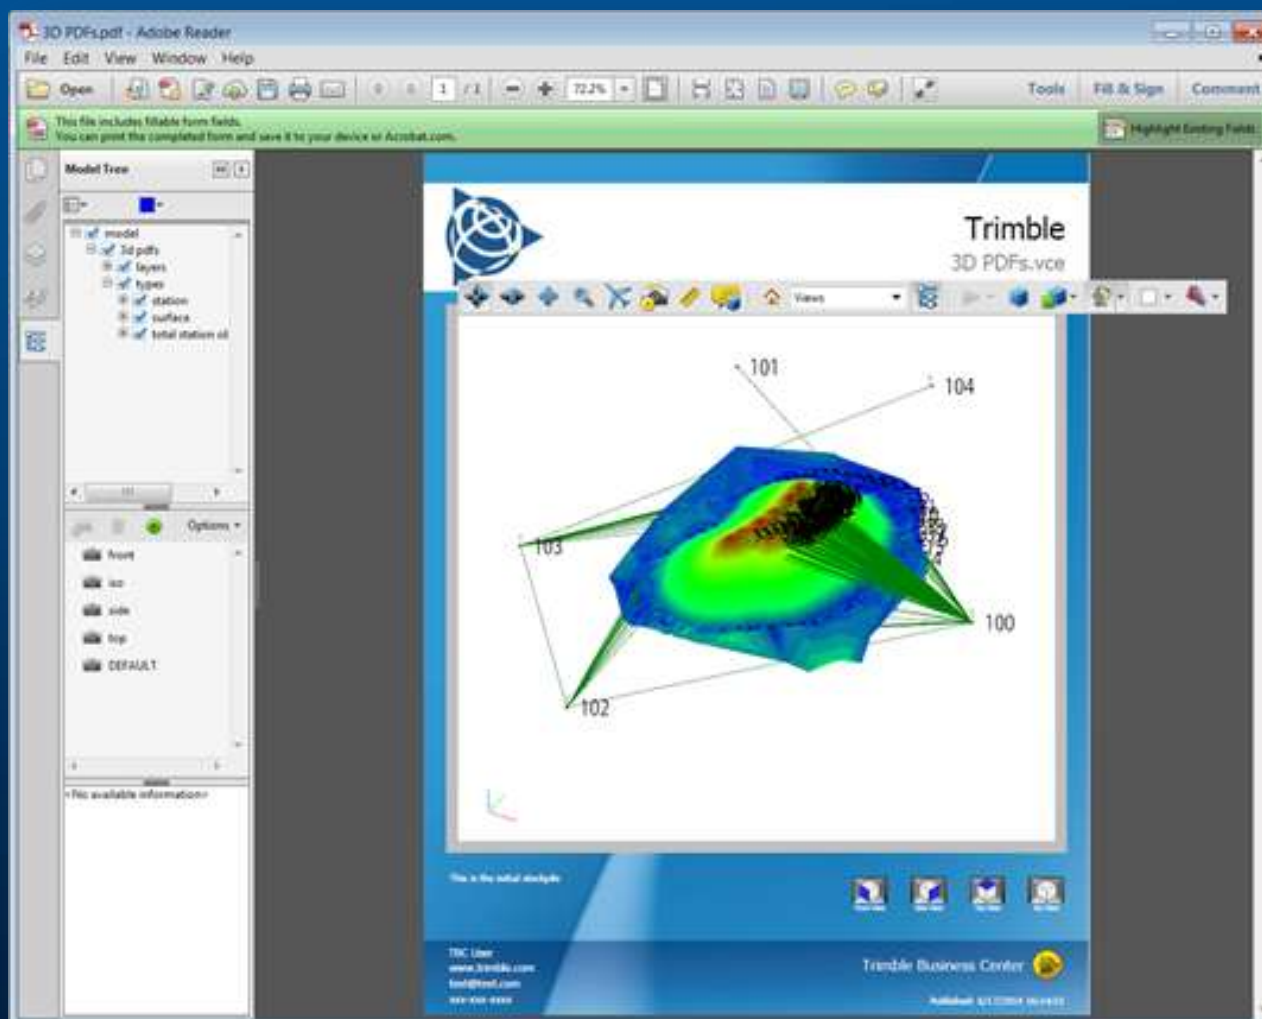

Measured stockpile surface compared to estimated foundation surface

Surfaces	
Stockpile 1	Classification: Stockpile

Volumes from Surface Geometry	
Approximate stockpile volume:	114.3 yd ³
Approximate depression volume:	0.1 yd ³

This is a report of the volume of a stockpile, as measured between the stockpile surface and a surface constructed from the base of the stockpile.

3D PDFs

3D PDFs allow users to measure and annotate data using only PDF-reading software

INPHO (SUITE)

Streamlining Processes

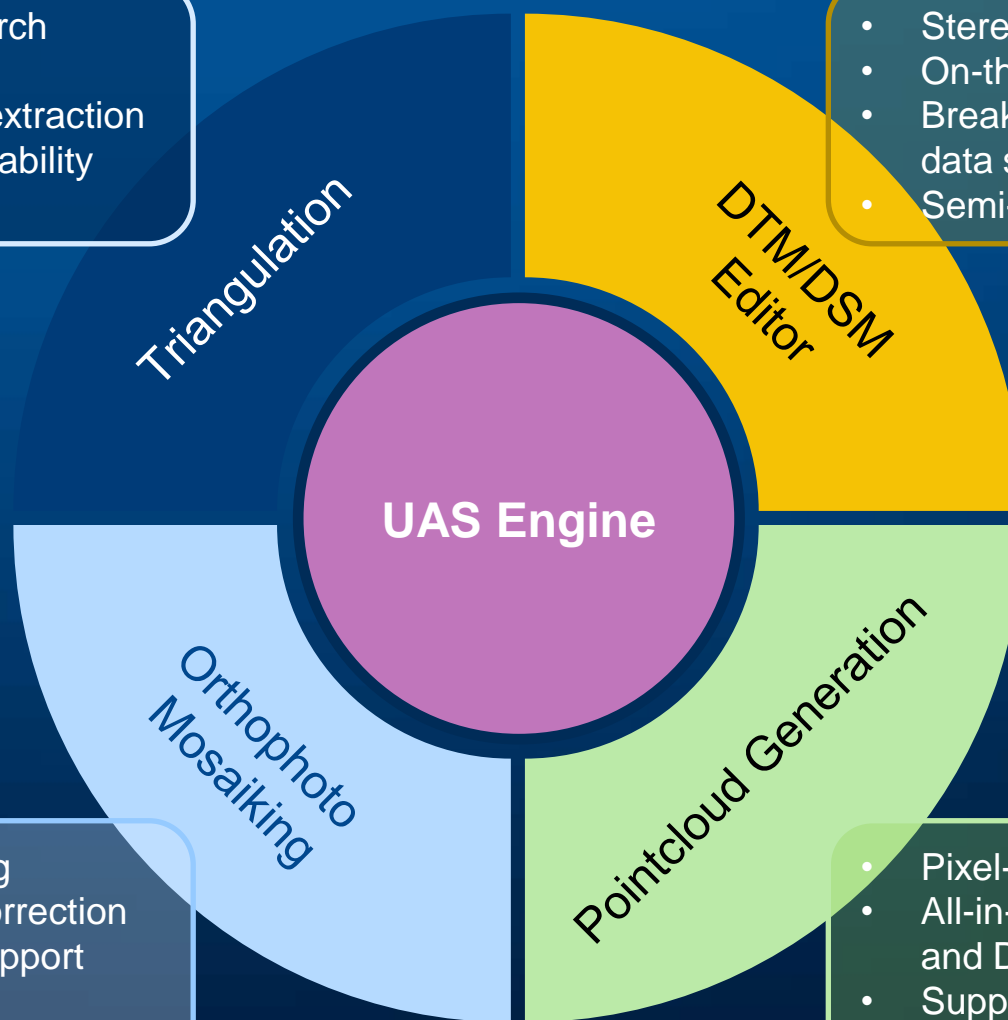

Combining all Inpho technology into UAS Workflow

UASMaster 7.0

- Graphical Error Search Functionality
- Automatic tie point extraction with interactive operability

- Stereo editing
- On-the-fly data control
- Breakline and morphological data support for processing
- Semi-automatic editing tools

- Automatic Mosaiking
 - Radiometry correction
 - True-Ortho Support
- Automatic Seamline Generation

- Pixel-based and FB matching
- All-in-one solution for DTM and DSM generation
- Support of morphological data

TRIMBLE REMOTE SENSING SUITE (TRSS)

Software Bundle designed to improve, accelerate and automate the creation and interpretation of geospatial information

The TRSS logo, where the letters 'T', 'R', 'S', and 'S' are rendered in a large, bold, yellow-outlined font. The 'T' is partially overlaid by a yellow silhouette of the Earth. The background features a satellite view of the Earth with blue orbital paths.

Trimble Remote Sensing Suite

Bundling Workflows

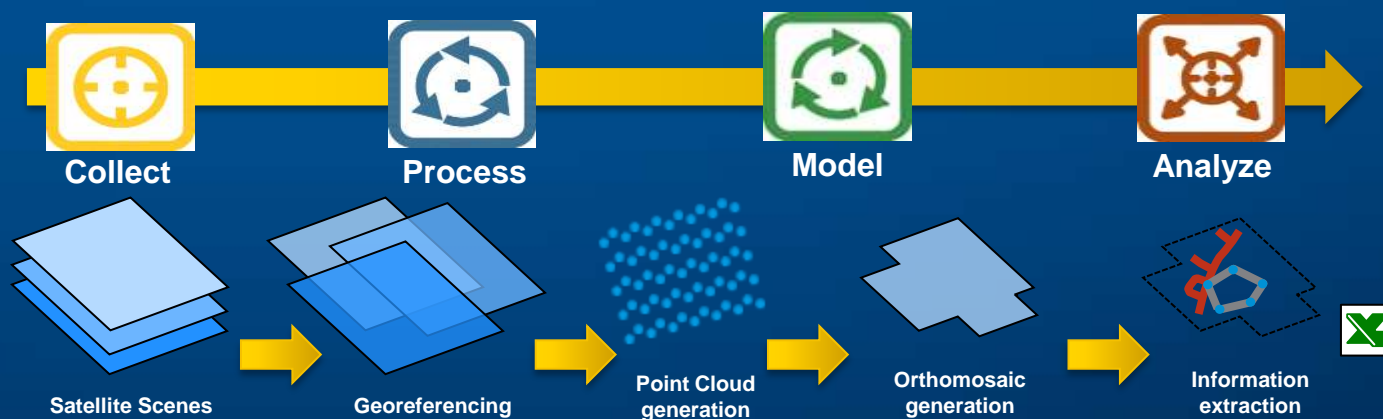

Combined Inpho technology and eCognition
for a complete satellite workflow

Introducing

→ Complete Satellite Data Processing, Modeling and Analysis Solution

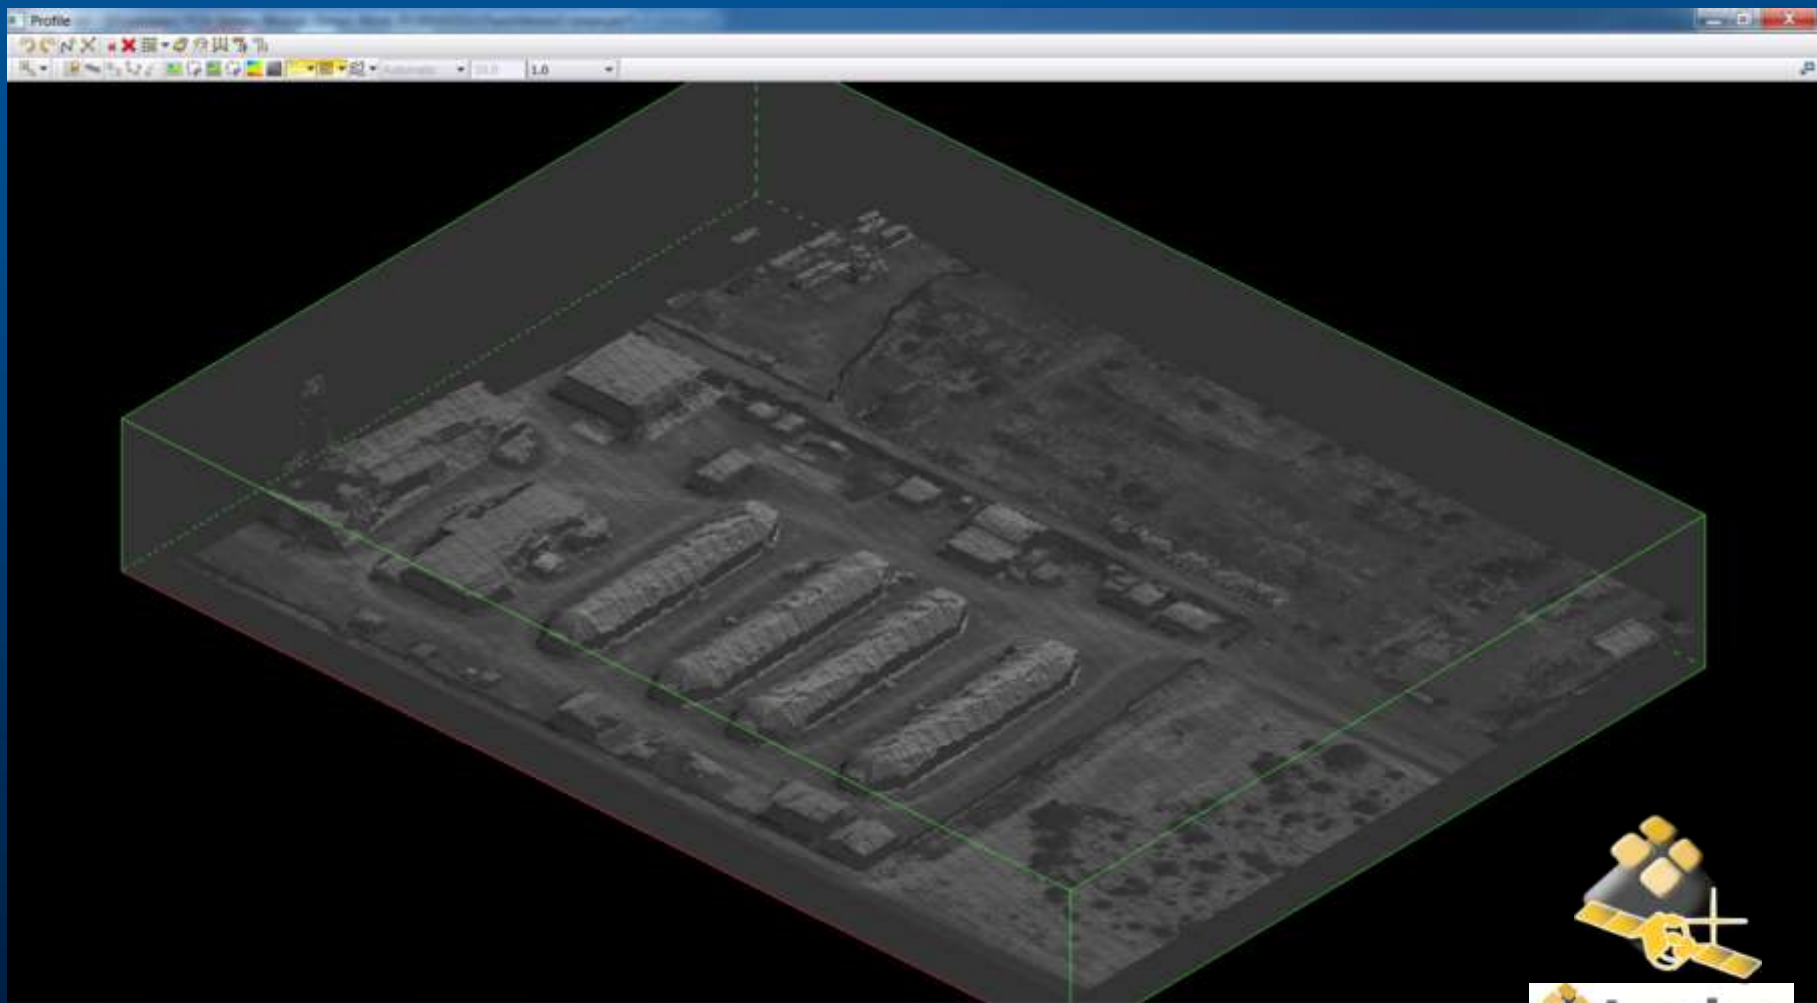

- Addressing the needs of remote sensing professionals generating high quality data, models and analytics from satellite based imagery
- Streamlined and simplified workflow to efficiently extract highly valued information
- Use Cases: geo-referencing, point cloud generation, orthorectification, mosaicking, land cover mapping, change detection
- Application fields: Environmental, urban planning, agriculture, oil and gas, forestry and mining

Target Customers

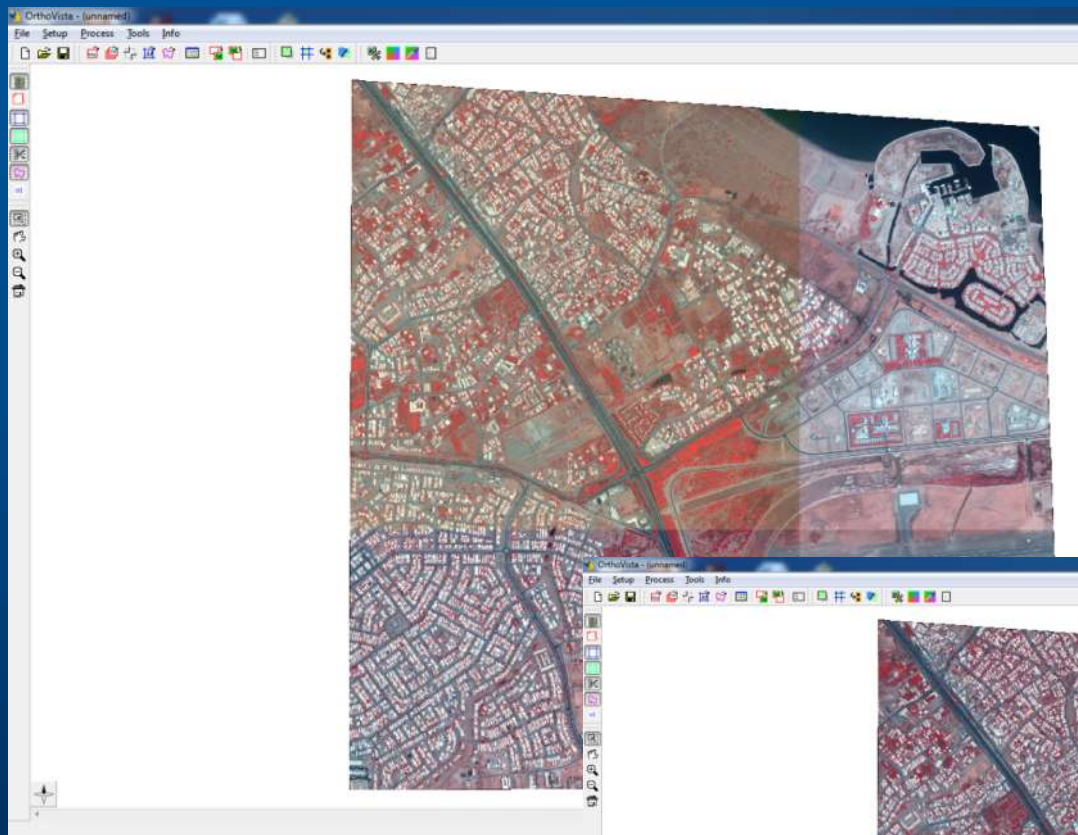

- **Remote Sensing Professionals; Image Analysts; Cartographers; GIS Analysts**
- **Government Organizations: Environment, Agriculture, Forestry, Urban Planning**
- **Environmental / Climate Change Groups (REDD++ programs)**

- **Photogrammetric companies expanding to include satellite based deliverables like elevation models derived from overlapping satellite scenes.**
- **Existing eCognition customers working with satellite imagery needing to increase geospatial accuracy; generate DTM/DSM's; create quality orthomosaics**

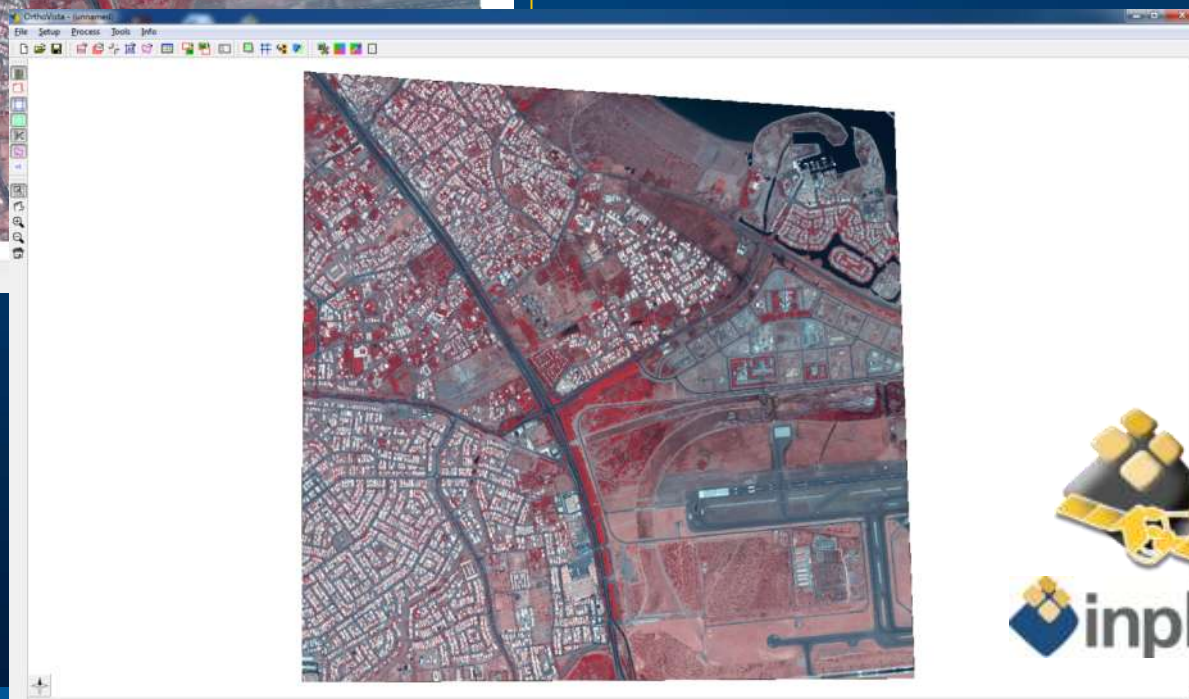

Dense Point cloud from WorldView 3

Orthomosaic generation

- Perfect balancing for homogeneous mosaics
- Automatic seam detection
- Adaptive blending through image texture analysis
- Interactive seam editing and color grading
- Multichannel support

ECOGNITION (SUITE AND ESSENTIALS)

- Analysis software for geospatial applications
- Enables users to automate the interpretation of geospatial data

Application Fields & Use Cases

- eCognition software offers capabilities for different application fields

Application Fields

Feature
Extraction

Change
Detection

Use Cases

Technology Principles

- **Object Based Image Analysis (OBIA)**
 - Examines pixels not in isolation: uses color, shape, texture and size of objects as well as their context and relationships → **Better results than pixel based approaches (Emulates the human mind's cognitive power)**

eCognition Products

Developing & Analysis Platform

→ Enables users to develop and execute solutions to transform geospatial data into geo-information

Out-of-the-box Application

→ Allows users at any skill level to quickly produce GIS-ready land cover information from imagery

ECOGNITION ESSENTIALS

eCognition Essentials

- Powerful out-of-the-box Land Cover and Change Detection Mapping solution
- Enables users at any skill level to quickly produce high-quality, GIS-ready deliverables from imagery

UPDATE INFORMATION (Change Detection)

eCognition Essentials

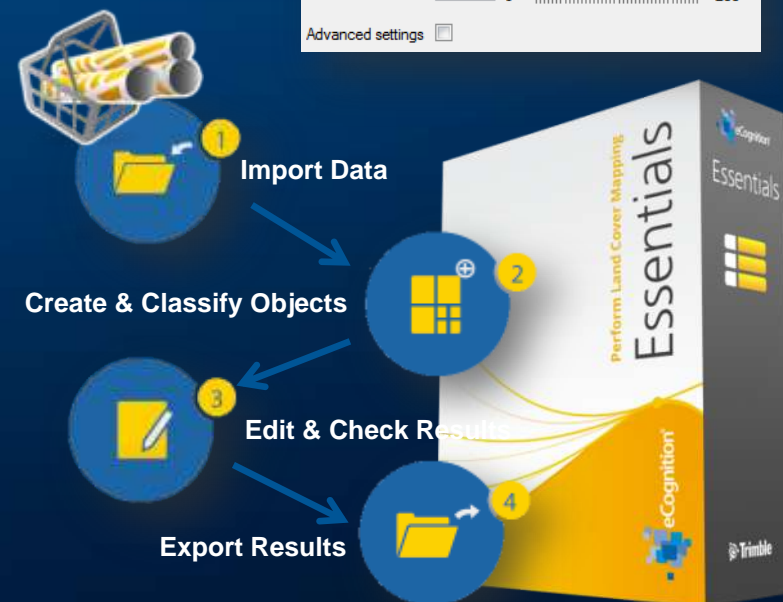

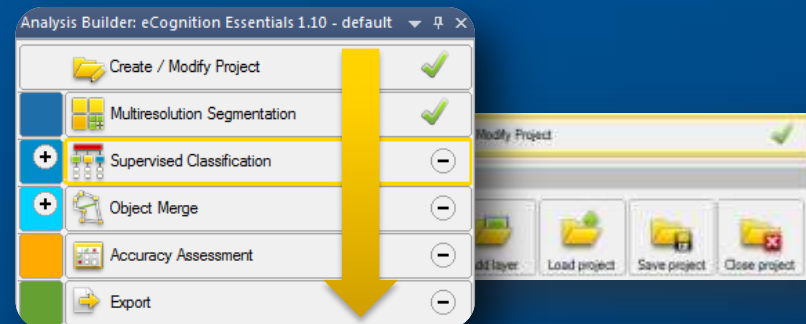

Key Features

– Efficient Mapping

- Intuitive and easy-to-use mapping UI
- Covers all mapping steps so that no additional analysis tools needed
- ➔ Little ramp-up time
- ➔ Rapid discovery and easy access to geospatial data via InSphere Data Marketplace

– Guided Analysis

- Predefined and structured workflow blocks streamlines the efforts of imagery-based mapping tasks
- The available components are specifically designed for the particular purpose, and their sequence is predefined as well
- ➔ Reduce complexity and focuses users on their specific tasks
- ➔ Increase productivity by UI guidance

Customer Benefits

- **Low Ramp-up Time** → Intuitive graphical user interface to perform land cover mapping and change detection on imagery
- **Get work done faster** → Guided and automated workflows for effectively transforming image data into actionable intelligence
- **InSphere Data Marketplace** → Rapid discovery and easy access to geospatial data

Use Case Examples

Basic Land Cover Mapping

- (1) Import Data (2) Create & Classify Objects (3) Edit & Check Results (4) Export Results

The screenshot displays the eCognition Essentials 1.00 software interface. The main window is titled "Essentials - [Project] - Level01 of 1 Classification". The interface is divided into several panels:

- Left Panel (Workflow):** A list of steps with checkboxes and progress indicators:
 - Create / Modify Project
 - Prepare Configuration
 - Multiresolution Segmentation
 - Supervised Classification
 - Apply Analysis to Image
 - Manual Reclassification
 - Object Merge
 - Minimum Mapping Unit
 - Accuracy Assessment
 - Export
- Settings Panel:**
 - Export folder: C:\Users\cwise\Desktop\Essenti
 - Export name: 03APR22012124-M2AS-000000078588_01_PD
 - Export format: shp
 - Export button
- Description Panel:**
 - Export thematic layer containing classification
- Main Map Area:** A satellite-style map showing a coastal area with a large body of water (blue) and surrounding land (green, brown, and grey). The map is overlaid with a classification result. A toolbar above the map includes "Display classes" (set to CIR), "Fit to window", and "No thematic overlay".
- Right Panel (Legend):**
 - Active class
 - Build up
 - Grassland
 - Water
 - Forest

The status bar at the bottom indicates "Ready" and "099 Objects".

Use Case Examples

Thematic Change Detection (i.e. Buildings)

- (1) Load Image and GIS layers (2) Classify Image Data (3) Compare Classification with GIS Layer (4) Export Results

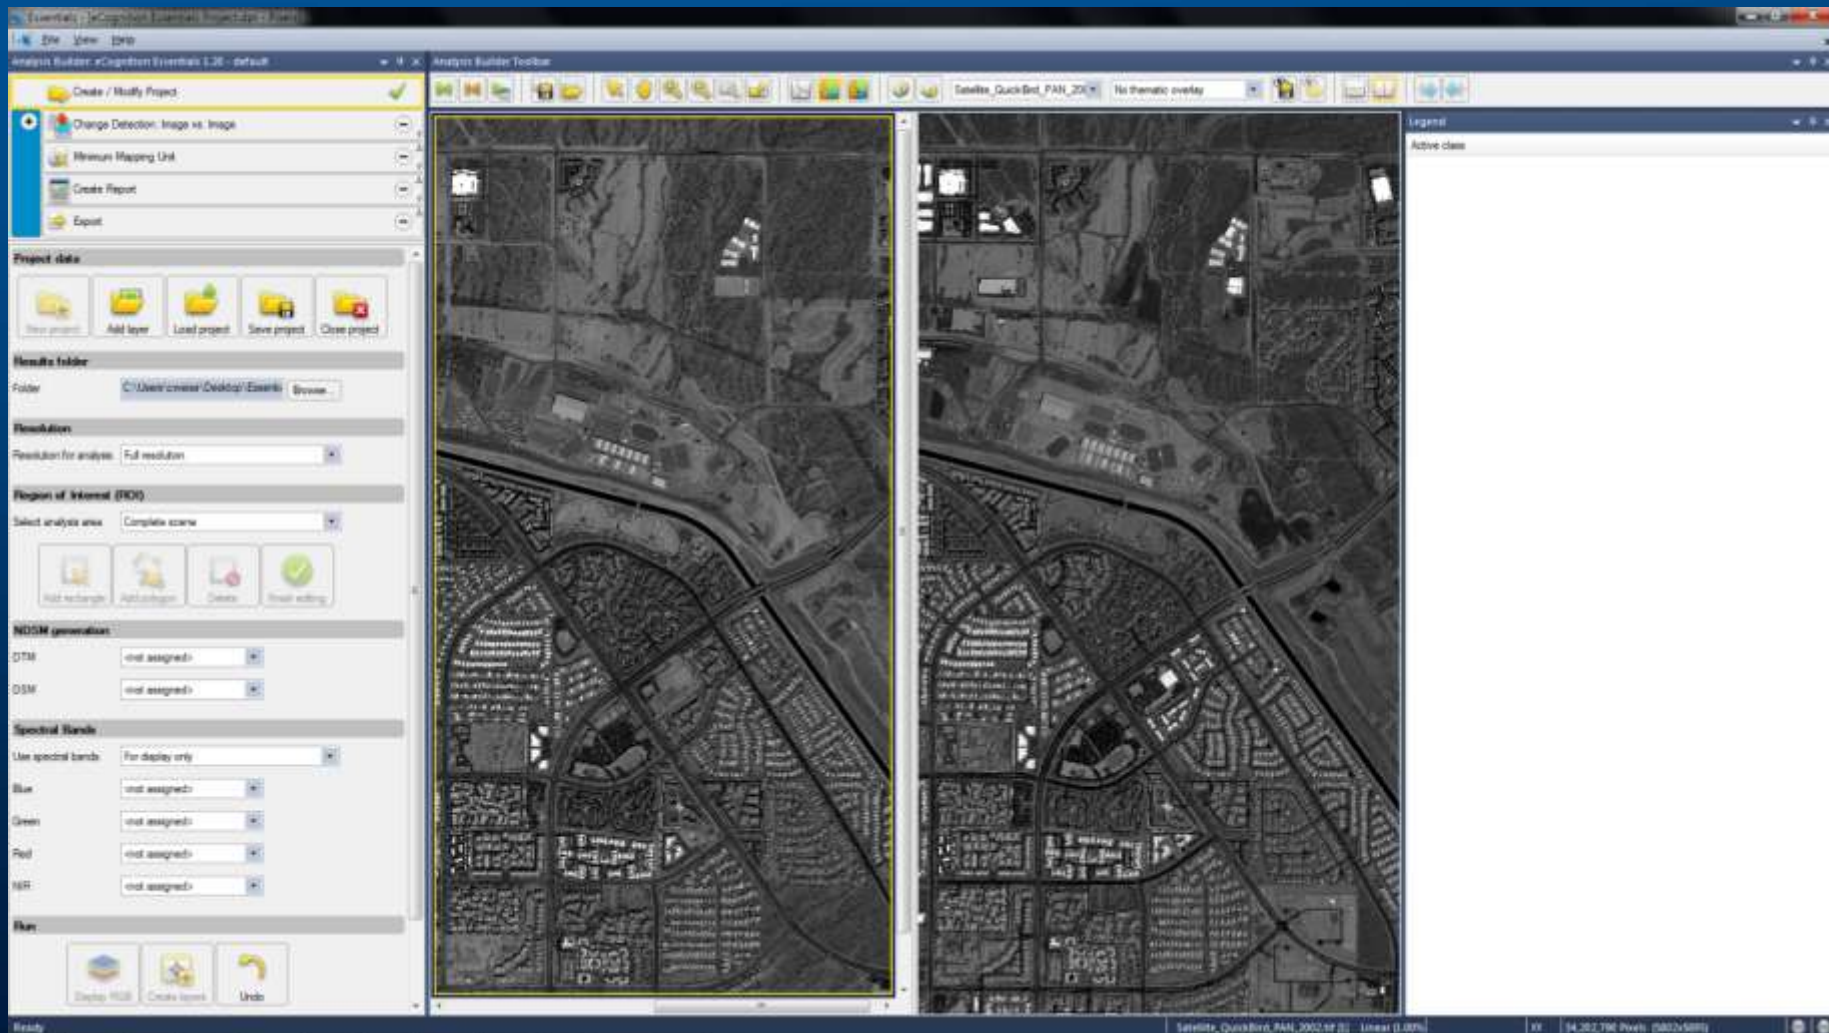

The screenshot shows the Analyst Builder software interface. The central window displays an aerial image with buildings classified into various categories. The 'Result Report' table is visible in the bottom right corner.

Class	No. of objects	Area	relative Area
Unclassified	105	106.007825 ha	84.49%
Building	144	5.84501875 ha	4.60%
Forest	355	10.14203125 ha	8.08%
New Building	293	2.460725 ha	1.96%
Missed Building	477	1.0197 ha	0.81%

Use Case Examples

Image Change Detection

- (1) Load Images (2) Create Difference Layer(s) (3) Classify Changes (4) Export Results

ECOGNITION SUITE

eCognition Developer & Server

- Advanced Analysis Software Suite available for geospatial applications
- Designed to improve, accelerate and automate the interpretation of geospatial data
- Enables users to create feature extraction or change detection solutions to transform geospatial data into geo-information

eCognition Developer:
development & analysis
environment for applications

eCognition Server:
processing environment

PROJECT EXAMPLES (RESULTS)

Use Case Examples

Vegetation Analysis closed to Powerlines

- (1) Load Data (2) Buffer Powerline (3) Restrict Analysis (4) Using LiDAR (5) Using Images (6) Using Context

The screenshot displays the Trimble software interface with a central map view and several panels on the right. The map shows a green field with a red outline representing a powerline and a magenta buffer zone. The interface includes a menu bar, a toolbar, and a status bar at the bottom.

Process Tree - [MainLevel, v1']

- Elevated Vegetation close to Powerlines
 - 0.031 create ROI vector layer (New algorithm in eCognition 9.1 - Buffering)
 - 04.774 create ROI object
 - 15.522 create image objects in ROI
 - 0.328 classify Elevated objects in ROI
 - 0.312 classify Vegetation and Artificial objects in ROI
 - 01.076 split Vegetation in different heights
 - 02.064 identify critical areas (New feature in eCognition 9.1 - Distance to Vector)

Process Properties

Setting: identify critical areas

Algorithm: execute child processes

Discussion: --

Scope: execute

Building & Vegetation Extraction

- **Customer**
 - The Department of Surveying and Geo Information of the State Government of Lower Austria
- **Task**
 - Automatic extraction of buildings and elevated vegetation (Urban Tree Canopy Assessment)
- **Input Data**
 - Ortho photos
 - RGB & NIR (0.15 m)
 - DSM + DTM (1 m)
- **Output**
 - Building rooftops (Shapefile)
 - Elevated vegetation in height classes (Shapefile)
 - Processed area: 20,000 km²

Building & Vegetation Extraction

- Building
- Vegetation
 - >20 m
 - 0-5 m
 - 5-10 m
 - 10-15 m
 - 15-20 m

Cadastral Change Detection

- **Customer**
 - Rhineland-Palatinate Survey and Land Register Office in Germany
- **Task**
 - Automatic detection of differences/ changes between cadastral buildings and “reality”
- **Input Data**
 - Ortho photos (RGB + NIR, 0.2 m)
 - DSM + DTM (1 m)
 - Building outlines
- **Output**
 - New buildings (Shapefile)
 - Disappeared buildings (Shapefile)

Cadastral Change Detection

Change Detection

 - Building (changed)
 - Building (new)
 - Building (unchanged)
 - Vegetation
 - Forest
 - Low Vegetation
 - Shrubs

Roof Type Extraction

- **Customer**
 - NBB – Utility Network Operator Berlin, Germany
- **Task**
 - Automatic generation of a roof type map
- **Data**
 - RGB & NIR Images (0.20 m)
 - LiDAR (> 4 pts/m²)
- **Output**
 - Roof types
 - Roof part suitability (slope, orientation)
 - 469 ha

Roof Type Extraction

- classes
- Building Roof Subarea Direction
 - East

 - North
 - South
 - West
- Building Roof Type
 - Flat Roof
 - Gable Roof (2 sloping sides)
 - Hip Roof (>= 4 sloping sides)
 - Pitched Roof (1 sloping side)

Counting of Tree Crowns

- **Customer**
 - Forestry Commission, Great Britain
- **Task**
 - Automatic counting of tree crowns
- **Input Data**
 - RGB (0.2 m)
- **Output**
 - Tree center (Shapefile)
 - Single tree attributes
 - Diameter
 - Area
 - Perimeter
 - Width, Length

Forestry Commission

Counting of Tree Crowns

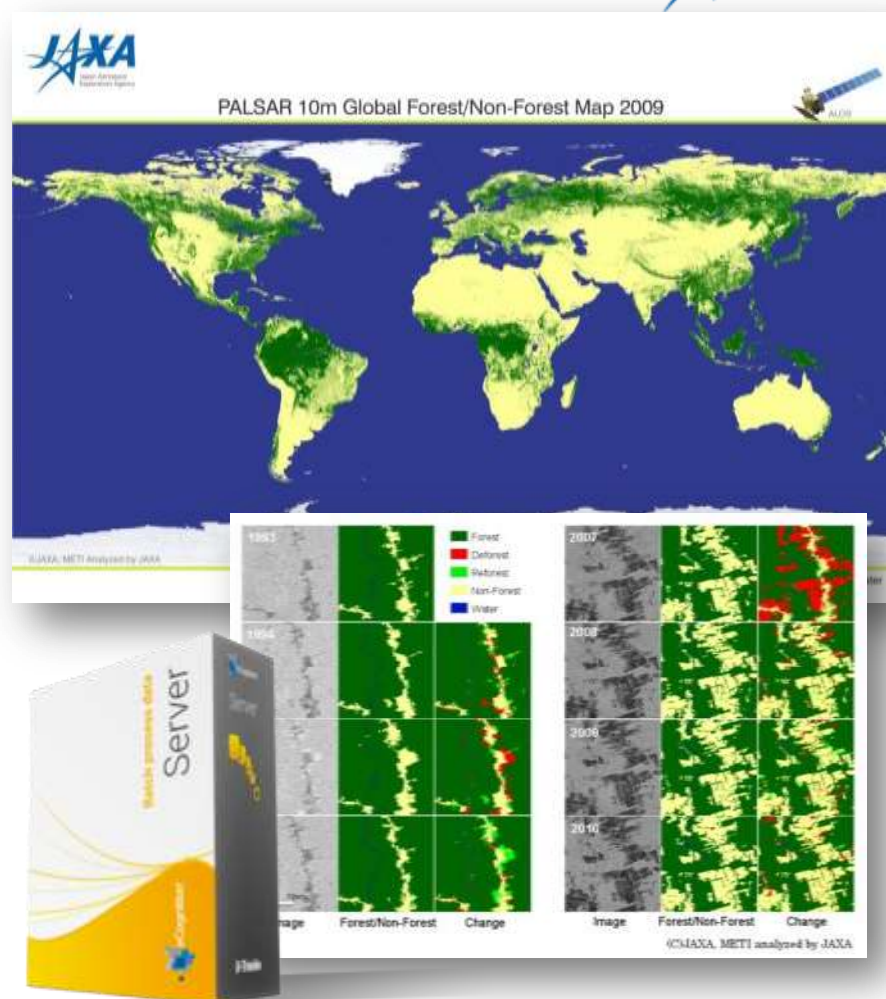

Forestry Commission

Global Forest Map

- **Customer**
 - Japan Aerospace Exploration Agency (JAXA)
- **Task**
 - Automatic forest/non-forest classification
- **Data**
 - ALOS PALSAR (L-band, 10 m)
- **Output**
 - Forest (Raster Map)
 - Non-Forest (Raster Map)

- **Customer Outcome**
 - World wide forest map of 2009 (86,000 scenes covering the globe)
 - Forest carbon tracking to monitor increases and decreases in forested area around the world
 - Monitor forest mass to prevent deforestation

Vegetation Vitality Mapping

- **Task**
 - Automatic vegetation/non-vegetation classification
 - Automatic extraction of 3 vitality/productivity classes per field
- **Input Data**
 - Trimble UX5
 - Orthophoto mosaic (CIR)
 - DSM
- **Output**
 - Vegetation Density Map
 - Vitality/Productivity Map
